

# Data Analysis Portfolio

---

S.Shakthi priyan

## **Professional Background**

Currently I'm in Third year pursuing B.Tech CSE(data science & artificial intelligence). I have secured 8.86 CGPA (till 5th Sem) and have several skills including Data Analysis, Python, P-spice simulation, Multisim, Machine Learning, MySQL, Excel.

I have worked on various personal projects related to Data Analysis, Machine Learning, Excel and Python. Also, I worked on various internship like Accenture and cognizant as data analyst and AI enginner in their virtual internship.

Also, I am well versed in front end development and app development, I have created an healthcare app and a AI chat bot .

Currently, I am working on Sign Language Detection for deaf and dumb people which is a group project for my mini project.

As I am a fresher it would be great to experience the real challenges of the corporate world and understand how things work. Being a fresher, I think I am very flexible and adaptive to learn new things. I have theoretical knowledge. But I am waiting to use my theoretical knowledge in a practical way. And I believe by putting significant efforts, I will learn.

# Data Analytics Process

## Description

We use Data Analytics in everyday life without even knowing it.

Your task is to give the example(s) of such a real-life situation where we use Data Analytics and link it with the data analytics process.

Andheri East, Mumbai, Maharashtra  
Panvel, Navi Mumbai, Maharashtra  
destination  
Get directions to your phone  
Bengaluru - Mumbai 1 hr 50 min  
/Mumbai Hwy/Mumbai - 41.3 km  
/Dharpur Rd/Mumbai - Pune  
/Mumbai - Satara Hwy/Sion - Panvel  
/Satara Hwy - Mumbai Hwy  
Best route now, avoids road closure on  
Satara Hwy - Mumbai Hwy  
This route has tolls.  
AM-11:07AM 1 hr 49 min  
Layers

# Data Analytics Process

## Design

### **Scenario: Going from Andheri (place in Mumbai) to Panvel (Place in Navi Mumbai)**

If a person wants to go from one place to another say Andheri to Panvel in our case, he/she may have many options to go for during the transit.

But he/she will only choose the best option according to his/her will.

The person will go through all the options which are available ad will do a step-by-step analysis while selecting the best route from his/her current location to the desired location.

The following steps would be taken by the person while making the right decision:-

- **Step 1: Plan:** -- First, one will decide which mode of transport will be most preferable i.e. Roadway or Railway In Roadway one has two options i.e. Either he/she should take a Uber, Ola, Meru etc. or a BEST/NMMT bus. In Railway one has three options wiz Western line, Harbor Line and Central Line
- **Step 2: Prepare:-** If one opts for Roadways, he/she has two options depending upon how much he/she is willing to pay wiz Uber/ola/meru or BEST/NMMT. If one opts for Railways, he/she has three modes options wiz (First class, AC class and Second Class) in which he/she can select which railway line route to take.
- **Step 3: Process:** -- One needs to think whether he/she which of the above-mentioned route will make his/her journey fast, comfortable as well as is cost effective.
- **Step 4: Analyze:** -- It's Obvious that if one is travelling alone no/some extra luggage/bag, he/she will not opt to pay Rs.800-1500 on Uber/Ola/Meru Cab along with the toll-charges (at Vashi on Mumbai Pune Expressway) The time taken by road to reach Panvel from Andheri is almost 1.5 – 2 hours. But the same transit can be done via Railway in just 50 minutes to 1.5 hour (depending upon type of train Fast or Slow) [Avoiding trains on Sunday due to MegaBlocks]. One can opt for the first-class ticket which costs around Rs.100 else can go for the second-class ticket which costs for just Rs.20
- **Step 5: Share:** -- After finally going through the above-mentioned steps one can just book a direct cab through the respective (OLA, UBER, MERU, etc.) apps. Else one can go to the station and ask for the ticket (First-class, second-class) from the ticket vendor at the ticket window, or could use an ATVM (Automatic Ticket Vending Machine) for buying the tickets via the ATVM card or just using UPI for the payment, or one could directly book his/her ticket via the UTS app.
- **Step 6: Act:** -- After buying the ticket/ booking the cab, one takes his/her seat (which is sometimes not available in the trains due to crowd/peak hours) and enjoys the ride till he/she reaches the destination

# Data Analytics Process

## **Conclusions**

Hence, we have seen how we can use the 6 steps of Data Analytics while making any decision in real life scenarios(finding the best transit route from Andheri to Panvel in our case)

The 6 steps used to take decisions in real life scenarios are:-

- **Plan**
- **Prepare**
- **Process**
- **Analyze**
- **Share**
- **Act**

# Instagram

## Instagram User Analytics

### Description

**User analysis is the process by which we track how users engage and interact with our digital product (software or mobile application) in an attempt to derive business insights for marketing, product & development teams.**

**These insights are then used by teams across the business to launch a new marketing campaign, decide on features to build for an app, track the success of the app by measuring user engagement and improve the experience altogether while helping the business grow.**

**You are working with the product team of Instagram and the product manager has asked you to provide insights on the questions asked by the management team.**

# Instagram

## Instagram User Analytics

### The Problem

**A) Marketing:** The marketing team wants to launch some campaigns, and they need your help with the following

- **Rewarding Most Loyal Users:** People who have been using the platform for the longest time. **Your Task:** Find the 5 oldest users of the Instagram from the database provided
- **Remind Inactive Users to Start Posting:** By sending them promotional emails to post their 1st photo. **Your Task:** Find the users who have never posted a single photo on Instagram
- **Declaring Contest Winner:** The team started a contest and the user who gets the most likes on a single photo will win the contest now they wish to declare the winner. **Your Task:** Identify the winner of the contest and provide their details to the team
- **Hashtag Researching:** A partner brand wants to know, which hashtags to use in the post to reach the most people on the platform. **Your Task:** Identify and suggest the top 5 most commonly used hashtags on the platform
- **Launch AD Campaign:** The team wants to know, which day would be the best day to launch ADs. **Your Task:** What day of the week do most users register on? Provide insights on when to schedule an ad campaign

# Instagram

## Instagram User Analytics

### The Problem (Cont..)

**B) Investor Metrics:** Our investors want to know if Instagram is performing well and is not becoming redundant like Facebook, they want to assess the app on the following grounds

- **User Engagement:** Are users still as active and post on Instagram or they are making fewer posts Your Task: Provide how many times does average user posts on Instagram. Also, provide the total number of photos on Instagram/ total number of users
- **Bots & Fake Accounts:** The investors want to know if the platform is crowded with fake and dummy accounts Your Task: Provide data on users (bots) who have liked every single photo on the site (since any normal user would not be able to do this).

# Instagram

## Instagram User Analytics

### Design

**Steps taken to load the data into the data base**

- Using the 'create db' function of MySQL create a data base
- Then add tables and column names
- Then add the values into them using the 'insert into' function of MySQL
- By using the 'select' command we can query the desired output

**Software used for querying the results**

--> MySQL Workbench 8.0 CE

# Instagram

## Instagram User Analytics

### Findings - I

To find the most loyal i.e. the top 5 oldest users of Instagram:

1. We will use the data from the users table by selecting the username and created\_at columns.

2. Then using the order by function we will order the desired output by sorting with the created\_at column in ascending order.

3. Then using the limit function, the output will be displayed for top 5 oldest Instagram users.

### Output/Result

username	created_at
Darby_Herzog	06-05-2016 00:14
Emilio_Bernier52	06-05-2016 13:04
Elenor88	08-05-2016 01:30
Nicole71	09-05-2016 17:30
Jordyn.Jacobson2	14-05-2016 07:56

# Instagram

## Instagram User Analytics

### Findings - II

To Find the most inactive users i.e. the users who have never posted a single photo on Instagram:

1. We will first select username column from the users table.

2. Then we will left join photos table on the users table, on users.id = photos.user\_id because, both the users.id and photos.user\_id have common contents in them.

3. Then we will find rows from the users table where the photos.id IS NULL

#### Output/Result

username	user_id
Aniya_Hackett	5
Kasandra_Homenick	7
Jaclyn81	14
Rocio33	21
Maxwell.Halvorson	24
Tierra.Trantow	25
Pearl7	34

# Instagram

## Instagram User Analytics

### Findings - III

To find the most the username, photo\_id, image\_url and total\_number\_of\_likes of that image:

1. First we will select the users.username, photos.id, photos.image\_url and count(\*) as total

2. Then, we will inner join the three tables wiz : photos, likes and users, on likes.photo\_id = photos.id and photos.user\_id = users.id

3. Then, by using group by function we will group the output on the basis of photos.id

4. Then, using order by function we will sorting the data on the basis of the total in descending order

5. Then, to find the most liked photo we will using limit function to view only the top liked photo's information

#### Output/Result

user_id	username	photo_id	image_url	total
52	Zack_Kemmer93	145	<a href="https://jarret.name">https://jarret.name</a>	48

# Instagram

## Instagram User Analytics

### Findings - IV

To find the top 5 most commonly used hashtags on Instagram:

1. We need to select the tag\_name column from the tag table and the count(\*) as total function so as to count the number of tags used individually.

2. Then, we need to join tags table and photo\_tags table, on tags.id = photo\_tags.tag\_id cause they contain the same content in them i.e. tag\_id

3. Then using the group by function we need to group the desired output on the basis of tags.tag\_name

4. Then using the order by function we need to sort the output on the basis of total(total number of tags per tag\_name) in descending order

5. Then, to find the top 5 most used tag names we will use the limit 5 function.

#### Output/Result

tag_name	total_number_of_times_tag_used_individually
smile	59
beach	42
party	39
fun	38
concert	24

# Instagram

## Instagram User Analytics

### Findings - V

To find the day of week on which most users register on Instagram:

1. First we define the columns of the desired output table using select dayname(created\_at) as day\_of\_week and count(\*) as total\_number\_of\_users\_registered from the users table

2. Then using the group by function we group the output table on the basis of day\_of\_week

3. Then using the order by function we order/sort the output table on the basis of total\_number\_of\_users\_registered in descending order

### Output/Result

day_of_week	total_number_of_users_registered
Thursday	16
Sunday	16
Friday	15
Tuesday	14
Monday	14
Wednesday	13
Saturday	12

# Instagram

## Instagram User Analytics

### Findings - VI

**To find the how many times does average posts on Instagram:**

**1. First, we need to find first the count number of photos(posts) that are present in the photos.id column of the photos table i.e. count(\*) from photos**

**2. Similarly, we need to find the number of users that are present in the users.id column of the users table i.e. count(\*) from users**

**3. Next, we need to divide both the values i.e. count(\*) from photos/count(\*) from users and hence we would get the total number of photos / total number of users**

**4. To find how many times the users posts on Instagram we need to find the total occurrences of each user\_id in photos table**

### Output/Result

total\_photos\_divide\_total\_photos

2.57

# Instagram

## Instagram User Analytics Analysis

After performing the analysis I have the following points:-

- The most loyal users i.e. the top 5 oldest users are:

username	created_at
Darby_Herzog	06-05-2016 00:14
Emilio_Bernier52	06-05-2016 13:04
Elenor88	08-05-2016 01:30
Nicole71	09-05-2016 17:30
Jordyn.Jacobson2	14-05-2016 07:56

- Out of the 100 total users there are 26 users who are inactive and they have never posted any kind of stuff of Instagram may it be any photo, video or any type of text. So, the Marketing team of Instagram needs to remind such inactive users
- So, the user named Zack\_Kemmer93 with user\_id 52 is the winner of the contest cause his photo with photo\_id 145 has the highest number of likes i.e. 48
- The top 5 most commonly used #hashtags along with the total count are smile(59), beach(42), party(39), fun(38) and concert(24)
- Most of the users registered on Thursday and Sunday i.e. 16 and hence it would prove beneficial to start AD Campaign on these two days
- So, there are in total 257 rows i.e. 257 photos in the photos table and 100 rows i.e. 100 ids in the users table which makes the desired output to be  $257 / 100 = 2.57$  (avg. users posts on Instagram)
- Out of the total user id's there are 13 such user id's who have liked each and every post on Instagram (which is not practically possible) and so such user id's are considered as BOTS and Fake Accounts

# Instagram

## Instagram User Analytics Analysis (Cont...)

**Using the 5 Whys approach I am finding the root cause of the following-**

- **Why did the Marketing team wanted to know the most inactive users?**
  - --> So, they can reach out to those users via mail and ask them What's keeping them away from using the Instagram.
- **Why did the Marketing team wanted to know the top 5 #hashtags used?**
  - --> May be the tech team wanted to add some filter features for photos and videos posted using the top 5 mentioned #hashtags
- **Why did the Marketing team wanted to know on which day of the week the platform had the most new users registered?**
  - --> So, that they can run more Ads of various brands during such days and also get profit from it
- **Why did the Investors wanted to know about the average posts per user has on Instagram?**
  - --> It is a fact that every brand or social platform is determined by the user engagement on such platforms, also investors wanted to know whether the platform has the right and authenticated user base. It also helps the tech team determine how to handle such traffic on the platform with the latest tech without disrupting the smooth and efficient functioning of the platform
- **Why did the Investors wanted to know the count of BOTS and Fake accounts if any?**
  - --> So that the Investors are assured that they are investing into an Asset and not a Future Liability

# Instagram

## Instagram User Analytics

### Conclusion

**In conclusion, I would like to conclude that not only Instagram but many other social media and commercial firms use such Analysis to find the insights from their customer data which in turn help the firms to find the customers who will be an Asset to the firm in the future and not some Liability.**

**Such Analysis and sorting of the customer base is done at an weekly, monthly, quarterly or yearly basis as per the needs of the business firms so as to maximize their profits in future with minimal cost to the company**

## Operation Analytics and Investigating Metric Spike

### Description

**Operation Analytics** is the analysis done for the complete end to end operations of a company. With the help of this, the company then finds the areas on which it must improve upon. You work closely with the ops team, support team, marketing team, etc and help them derive insights out of the data they collect.

Being one of the most important parts of a company, this kind of analysis is further used to predict the overall growth or decline of a company's fortune. It means better automation, better understanding between cross-functional teams, and more effective workflows.

Investigating metric spike is also an important part of operation analytics as being a Data Analyst you must be able to understand or make other teams understand questions like- Why is there a dip in daily engagement? Why have sales taken a dip? Etc. Questions like these must be answered daily and for that its very important to investigate metric spike.

You are working for a company like Microsoft designated as Data Analyst Lead and is provided with different data sets, tables from which you must derive certain insights out of it and answer the questions asked by different departments.

# Operation Analytics and Investigating Metric Spike

## The Problem

### Case Study 1 (Job Data)

- **Number of jobs reviewed:** Amount of jobs reviewed over time.
- **Your task:** Calculate the number of jobs reviewed per hour per day for November 2020?
  
- **Throughput:** It is the no. of events happening per second.
- **Your task:** Let's say the above metric is called throughput. Calculate 7 day rolling average of throughput? For throughput, do you prefer daily metric or 7-day rolling and why?
  
- **Percentage share of each language:** Share of each language for different contents.
- **Your task:** Calculate the percentage share of each language in the last 30 days?
  
- **Duplicate rows:** Rows that have the same value present in them.
- **Your task:** Let's say you see some duplicate rows in the data. How will you display duplicates from the table?

# Operation Analytics and Investigating Metric Spike

## The Problem(Cont...)

### Case Study 2 (Investigating metric spike)

- **User Engagement:** To measure the activeness of a user. Measuring if the user finds quality in a product/service.
- **Your task:** Calculate the weekly user engagement?
  
- **User Growth:** Amount of users growing over time for a product.
- **Your task:** Calculate the user growth for product?
  
- **Weekly Retention:** Users getting retained weekly after signing-up for a product.
- **Your task:** Calculate the weekly retention of users sign up cohort?
  
- **Weekly Engagement:** To measure the activeness of a user. Measuring if the user finds quality in a product/service weekly.
- **Your task:** Calculate the weekly engagement per device?
  
- **Email Engagement:** Users engaging with the email service.
- **Your task:** Calculate the email engagement metrics?

## Operation Analytics and Investigating Metric Spike

Design

### **Steps taken to load the data into the data base**

- **Using the 'create db' function of MySQL create a data base**
- **Then add tables and column names**
- **Then add the values into them using the 'insert into' function of MySQL**
- **By using the 'select' command we can query the desired output**

### **Software used for querying the results**

--> **MySQL Workbench 8.0 CE**

### **Software used for analyzing using Bar plots**

--> **Microsoft Excel**

# Operation Analytics and Investigating Metric Spike

**Job Data**

**Findings - I**

**To find the number of jobs reviewed per hour per day of November 2020:**

- 1. We will use the data from job\_id columns of the job\_data table.**
- 2. Then we will divide the total count of job\_id (distinct and non-distinct) by (30 days \* 24 hours) for finding the number of jobs reviewed per day**

**Output / Result**

number_of_jobs_reviewed_per_day_non_distinct
0.0111

number_of_jobs_reviewed_per_day_distinct
0.0083

# Operation Analytics and Investigating Metric Spike

## Job Data

## Findings - II

**For calculating the 7-day rolling daily metric average of throughput:-**

- 1. We will be first taking the count of job\_id(distinct and non-distinct) and ordering them wr.t ds (date of interview)**
- 2. Then by using the ROW function we will be considering the rows between 6 preceding rows and the current row**
- 3. Then we will be taking the average of the jobs\_reviewed**

## Output / Result

date_of_review	jobs_reviewed	throughput_7_rolling_average
25-11-2020	1	1
26-11-2020	1	1
27-11-2020	1	1
28-11-2020	2	1.25
29-11-2020	1	1.2
30-11-2020	2	1.3333

date_of_review	jobs_reviewed	throughput_7_rolling_average_non_distinct_job_id
25-11-2020	1	1
26-11-2020	1	1
27-11-2020	1	1
28-11-2020	2	1.25
29-11-2020	1	1.2
30-11-2020	2	1.3333

# Operation Analytics and Investigating Metric Spike

## Job Data

### Findings - III

**To Calculate the percentage share of each language (distinct and non-distinct)-:**

**1. We will first divide the total number of languages (distinct/ non-distinct) by the total number of rows presents in the table**

**2 Then we will do the grouping based on the languages.**

### Output / Result

job_id	language	total_of_each_language	percentage_share_of_each_language
21	English	1	12.5
22	Arabic	1	12.5
23	Persian	3	37.5
25	Hindi	1	12.5
11	French	1	12.5
20	Italian	1	12.5

# Operation Analytics and Investigating Metric Spike

## Job Data

### Findings - III(Cont..)

#### Output / Result

job_id	language	total_of_each_language	percentage_share_of_each_distinct_language
22	Arabic	1	12.5
21	English	1	12.5
11	French	1	12.5
25	Hindi	1	12.5
20	Italian	1	12.5
23	Persian	1	37.5

# Operation Analytics and Investigating Metric Spike

## Job Data

### Findings - IV

To view the duplicate rows having the same value we will:-

1. First decide in which do we need to find the duplicate row values
2. After deciding the column(parameter) we will use the **ROW\_NUMBER** function to find the row numbers having the same value
3. Then we will portioning the **ROW\_NUMBER** function over the column (parameter) that we decided i.e. **job\_id**
4. Then using the **WHERE** function we will find the **row\_num** having value greater than 1 i.e. **row\_num > 1** based on the occurrence of the **job\_id** in the table

### Output / Result

ds	job_id	actor_id	event	language	time_spent	org	row_num
28-11-2020	23	1005	transfer	Persian	22	D	2
26-11-2020	23	1004	skip	Persian	56	A	3

# Operation Analytics and Investigating Metric Spike

## Investigating Metric Spike

### Findings - I

To find the weekly user engagement:-

1. We will extract the week from the occurred\_at column of the events table using the EXTRACT function and WEEK function
2. Then we will be counting the number of distinct user\_id from the events table
3. Then we will use the GROUP BY function to group the output w.r.t week from occurred\_at

#### Output / Result

week_number	number_of_users
18	791
19	1244
20	1270
21	1341
22	1293
23	1366
24	1434

# Operation Analytics and Investigating Metric Spike

## Investigating Metric Spike

### Findings - I (Cont...)

#### Output / Result

Weekly user\_engagement

# Operation Analytics and Investigating Metric Spike

## Investigating Metric Spike Findings - II

To find the user growth (number of active users per week):-

1. First we will extract the year and week for the occurred\_at column of the users table using the extract, year and week functions

2. Then we will group the extracted week and year on the basis of year and week number

3. Then we ordered the result on the basis of year and week number

4. Then we will find the cumm\_active\_users using the SUM, OVER and ROW function between unbounded preceding and current row

### Output / Result

year_num	week_num	num_active_users	cum_active_users	year_num	week_num	num_active_users	cum_active_users
2013	1	67	67	2013	45	97	2564

## Operation Analytics and Investigating Metric Spike

**Investigating Metric Spike**

**Findings - II (Cont...)**

**Output / Result**

count
9381

# Operation Analytics and Investigating Metric Spike

## Investigating Metric Spike

### Findings - III

**The weekly retention of users sign up cohort can be calculated by two means i.e. either by specifying the week number (18 to 35) or for the entire column of occurred\_at of the events table.**

- 1. Firstly we will extract the week from occurred\_at column using the extract, week functions**
- 2. Then, we will select out those rows in which event\_type = 'signup\_flow' and event\_name = 'complete\_signup'**
- 3. If finding for a specific week we will specify the week number using the extract function**
- 4. Then using the left join we will join the two tables on the basis of user\_id where event\_type = 'engagement'**
- 5. Then we will use the Group By function to group the output table on the basis of user\_id**
- 6. Then we will use the Order By function to order the result table on the basis of user\_id**

### Output / Result

**Google Drive Link for saved result  
(without specifying week number)**

csv - Google Drive**

# Operation Analytics and Investigating Metric Spike

## Investigating Metric Spike

### Findings - IV

To find the weekly user engagement per device:-

1. Firstly we will extract the year\_num and week\_num from the occurred\_at column

of the events table using the extract, year and week function

2. Then we will select those rows where event\_type = 'engagement' using the WHERE clause

3. Then by using the Group By and Order By function we will group and order the result on the basis of year\_num, week\_num and device

### Output / Result

[Google Drive link for saved result](#)

**question D weekly user engagement per device.csv - Google Drive**

# Operation Analytics and Investigating Metric Spike

## Investigating Metric Spike

### Findings - V

To find the email engagement metrics(rate) of users:-

1. We will first categorize the action on the basis of `email_sent`, `email_opened` and `email_clicked` using the **CASE, WHEN, THEN** functions
2. Then we select the sum of category of `email_opened` divide by the sum of the category of `email_sent` and multiply the result by 100.0 and name is as `email_opening_rate`
3. Then we select the sum of category of `email_clicked` divide by the sum of the category of `email_sent` and multiply the result by 100.0 and name is as `email_clicking_rate`
4. `email_sent = ('sent_weekly_digest','sent_reengagement_email')`
5. `email_opened = 'email_open'`
6. `email_clicked = 'email_clickthrough'`

### Output / Result

email_opening_rate	email_clicking_rate
33.58338805	14.78988838

# Operation Analytics and Investigating Metric Spike Analysis

From the tables and Bar plot I have infer the following:-

- number of distinct job reviewed per day is 0.0083
- number of non-distinct jobs reviewed per day is 0.0111
- 7 day rolling average throughput for 25, 26, 27, 28, 29 and 30 Nov 2020 are 1, 1, 1, 1.25, 1.2 and 1.3333 respectively(for both distinct and non-distinct)
- Percentage Share of each language i.e. Arabic, English, French, Hindi, Italian and Persian are 12.5, 12.5, 12.5, 12.5, 12.5 and 37.5 respectively(for both distinct and non-distinct)
- There are 2 duplicates values/ rows having job\_id = 23 and language = Persian in both the rows

Using the Why's approach I am trying to find more insights

- Why there is a difference of values between the number of distinct jobs reviewed per day and number of non-distinct jobs reviewed per day?  
----> May be due to repeated values in two or more rows or the dataset consisted of duplicate rows
- Why one shall use 7 day rolling average for calculating throughput and not daily metric average?  
----> For calculating the throughput we will be using the 7-day rolling because 7-day rolling gives us the average for all the days right from day 1 to day 7 Whereas daily metric gives us average for only that particular day itself.
- Why is it that percentage share of all other languages is 12.5% but that of language = 'Persian' is 37.5?  
----> In such cases there are two chances i.e. either there were duplicate rows having language as 'Persian' or there were really two or more unique people who were speaking in Persian language
- Why do we need to look for duplicate rows in an dataset?  
----> Duplicates have a direct influence of the Analysis going wrong and may led to wrong Business Decision leading to loss to the company or any entity; so to avoid these one must look for duplicates and remove them where necessary

# Operation Analytics and Investigating Metric Spike

## Analysis (Cont...)

**From the tables and Bar plot I have infer the following:-**

- The weekly user engagement is the highest for week 31 i.e. 1685
- There are in total 9381 active users from 1st week of 2013 to the 35th week of 2014
- The email\_opening\_rate is 33.5833 and email\_clicking\_rate is 14.78988

**I have used the Why's approach to gain fewmore insights:-**

- **Why is the weekly user engagement so less in the beginning and then got increased?**  
----> It is a fact that for any new product or service launched, during it's initial period in the market it is less known to all people only some people use the product and based on their experience the product/ service engagement increases or decreases depending on whether the consumer experience was good or bad. In this case since the user engagement increased after 2-3 weeks of the launch means that the consumer had a good experience with the product/ service
- **Why is weekly retention so important?**  
----> Weekly retention helps the firms to convince and help those visitors who just complete the sign-up or leave the sign-up process in between, such visitors may become customers in future if they are guided and convinced properly
- **Why is weekly engagement per device plays an important role?**  
----> Based on the reviews from users weekly engagement per device helps the firms on which devices they must focus more and which devices need more improvements so they also get a good review in users weekly engagement per device
- **Why is Email Engagement plays an important role?**  
----> Email Engagement helps the firms to decide the discounts and offers on specific products. In this case the email\_opening\_rate is 33.58 i.e. out of the 100 mails send only 34 mails were opened and the email\_clicking\_rate is 14.789 i.e. out of 100 mails opened only 15 mails were clicked for more details regarding the discount/ product details. This means that the current firm needs to have some more catchy line for mails also the firm needs to do rigorous planning and deciding content before sending the mails

## Operation Analytics and Investigating Metric Spike

### Conclusion

**In Conclusion , I would like to conclude that Operation Analytics and Investigating Metric Spike are very necessary and they must be done on daily, weekly, Monthly, Quarterly or Yearly basis based on the Business needs of the firm.**

**Also, any firm/ entity must focus on the Email Engagement with the customers; the firm must use catchy headings along with reasonable discounts and coupons so as to increase their existing customer base**

**Also any firm must have a separate department(if possible) so as to hear out to the problems of those Visitors who had left the Sign-up Process in between, the firm must guide them so as to convert them from Visitors to Customers**

# HIKE ME

## Hiring Process Analytics

### Description

**Hiring process is the fundamental and the most important function of a company. Here, the MNCs get to know about the major underlying trends about the hiring process. Trends such as- number of rejections, number of interviews, types of jobs, vacancies etc. are important for a company to analyse before hiring freshers or any other individual. Thus, making an opportunity for a Data Analyst job here too!**

**Being a Data Analyst, your job is to go through these trends and draw insights out of it for hiring department to work upon.**

**You are working for a MNC such as Google as a lead Data Analyst and the company has provided with the data records of their previous hirings and have asked you to answer certain questions making sense out of that data.**

# Hiring Process Analytics

## The Problem

- **Hiring:** Process of intaking of people into an organization for different kinds of positions.
- **Your task:** How many males and females are Hired ?
  
- **Average Salary:** Adding all the salaries for a select group of employees and then dividing the sum by the number of employees in the group.
- **Your task:** What is the average salary offered in this company ?
  
- **Class Intervals:** The class interval is the difference between the upper class limit and the lower class limit.
- **Your task:** Draw the class intervals for salary in the company ?
  
- **Charts and Plots:** This is one of the most important part of analysis to visualize the data.
- **Your task:** Draw Pie Chart / Bar Graph ( or any other graph ) to show proportion of people working different department ?
  
- **Charts:** Use different charts and graphs to perform the task representing the data.
- **Your task:** Represent different post tiers using chart/graph?

# Hiring Process Analytics

## Design

**Before starting the actual analysis I have:-**

- **Firstly I made a copy of the raw data where I can perform the Analysis so that what ever changes I made it will not affect the original data**
- **Secondly I looked for blank spaces and NULL values if any.**
- **Then I had imputed the numerical blank and NULL cells with mean of the column(if no outliers existed for that particular column) or with median (if outliers existed for that column)**
- **Then I looked for if any outliers exists and replaced them with the median of the particular column where the outlier existed**
- **Then for blank cells of categorical variables I had replaced with the variable with the highest count**
- **Then I looked for duplicate rows and removed them if any**
- **Then I removed the irrelevant columns(data) from the dataset which was not necessary for doing the analysis**

**Software used for doing the overall Analysis:-**

----> Microsoft Excel

# Hiring Process Analytics

## Findings - I

**From the above table and bar plot I have inferred that:-**

- **There are 2563 Males hired for different roles in the company**
- **While there are only 1855 Females hired for different roles in the company**

# Hiring Process Analytics

## Findings - II

**To find the average salary offered in this company:-**

**1. First, we need to remove the outliers i.e. to remove the salaries below 1000 and above 100000**

**2. Then using the formula**

**=AVERAGE(entire\_column\_of\_salary\_after\_removing\_outliers)**

## Output/ Result

**49983.03223**

# HIKE ME

## Hiring Process Analytics

### Findings - III

**From the above Bar plot I have inferred that the highest number of posts (both hired and rejected) is 406 for the salary range 41807 to 46907**

**From the above Bar plot I have inferred that the highest number of posts (hired) is 315 for the salary range 42307 to 54107**

# Hiring Process Analytics

## Findings - IV

Department	Status	Count of Department
Finance Department		176
General Management		113
Human Resource Department		70
Marketing Department		202
Operations Department		1843
Production Department		246
Purchase Department		230
Sales Department		485
Service Department		1332

# Hiring Process Analytics

## Findings - IV (Cont...)

**From the above table, pie chart and Bar Plot I have inferred that the Highest number of people were working in the Operations Department i.e. 1843 which accounts for almost 39% of the total workforce of the company**

# HIKE ME

## Hiring Process Analytics

### Findings - V

Post Name	Status	Count of Post Tiers (All)
b9		463
c-10		232
c5		1747
c8		321
c9		1792
i1		222
i4		88
i5		787
i6		527
i7		982
m6		3
m7		1
n10		1
n6		1
n9		1

Count of Post Tiers (All)

# Hiring Process Analytics

## Findings - V(Cont...)

**From the above table, Bar plot and Pie chart I have inferred that the c9 post has the highest number of openings i.e. 1792 which accounts for 25% of the total job openings of the company/firm**

# HIKE ME

## Hiring Process Analytics

### Analysis

**Using the Why's approach I am trying to find some more insights:-**

- **Why is there so much difference in the total number of Males and Females hired?**
- ---> **Since, the Company is an MNC and people from all around the world work here; such difference exists due to the fact that the men-women equality has not yet reached to each and every part of the world. Some regions in the Gulf countries and in African continents along with some Asian countries face this problem**
- **Why is it that there are less number of people who have salaries more than 85000 and there are more number of people who have salaries 35000 to 60000?**
- ----> **It is a fact that there are some positions in company who require a specialist person with years of experience in that particular field of work and hence company looks for such people and offer them higher salary packages also such people regularly prove themselves an asset to the company. For any company there are more people having the salary in the range 35000 to 60000; such people have spent 3-4 years in the company and their salary and increments are decided based on their monthly, quarterly and yearly performance.**
- **Why is that the Operations department has the highest number of people working?**
- ----> **Operations Department works like a central hub for all other departments, all the execution tasks are carried out by this department. Operations department has the highest work load when compared to all other departments**

# HIKE ME

## Hiring Process Analytics

### Conclusion

**In the conclusion part, I would like to conclude that Hiring Process Analytics plays an important part for all the companies and firms to decide the job openings for the near future.**

**Hiring Process Analytics is done on monthly, quarterly or yearly basis as per the needs and policies of the companies**

**For any company the Operations Department has the highest number of workforce due to the workload on this department as this department acts as a central hub for all the executive tasks carried out**

**For any company there will some employees who have high salary packages compared to other employees, and this is due to the fact that they have some special skills and years of experience in their particular field of work**

**Hiring Process Analytics helps the company to decide the salaries for new freshers joining the company; also it tells requirement of workforce by each department; it also helps the company decide the appraisals and increment for it's current employess**

# IMDB Movie Analysis

## Description

**You are provided with dataset having various columns of different IMDB Movies. You are required to Frame the problem.**

**For this task, you will need to define a problem you want to shed some light on.**

**Once you have defined a problem, clean the data as necessary, and use your Data Analysis skills to explore the data set and derive insights.**

# IMDB Movie Analysis

## The Problem

- **Movies with highest profit:** Create a new column called **profit** which contains the difference of the two columns: **gross** and **budget**. Sort the column using the **profit** column as reference. Plot **profit** (y-axis) vs **budget** (x axis) and observe the outliers using the appropriate chart type.  
• **Your task:** Find the movies with the highest profit?
- **Top 250:** Create a new column **IMDb\_Top\_250** and store the top 250 movies with the highest IMDb Rating (corresponding to the column: **imdb\_score**). Also make sure that for all of these movies, the **num\_voted\_users** is greater than 25,000. Also add a **Rank** column containing the values 1 to 250 indicating the ranks of the corresponding films.  
• Extract all the movies in the **IMDb\_Top\_250** column which are not in the English language and store them in a new column named **Top\_Foreign\_Lang\_Film**. You can use your own imagination also!  
• **Your task:** Find **IMDb Top 250**
- **Best Directors:** Group the column using the **director\_name** column. Find out the top 10 directors for whom the mean of **imdb\_score** is the highest and store them in a new column **top10director**. In case of a tie in **IMDb score** between two directors, sort them alphabetically.  
• **Your task:** Find the best directors
- **Popular Genres:** Perform this step using the knowledge gained while performing previous steps.  
• **Your task:** Find popular genres

# IMDB Movie Analysis

## The Problem (Cont...)

- **Charts:** Create three new columns namely, **Meryl\_Streep**, **Leo\_Caprio**, and **Brad\_Pitt** which contain the movies in which the actors: 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' are the lead actors. Use only the **actor\_1\_name** column for extraction. Also, make sure that you use the names 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' for the said extraction.
- Append the rows of all these columns and store them in a new column named **Combined**.
- Group the combined column using the **actor\_1\_name** column.
- Find the mean of the **num\_critic\_for\_reviews** and **num\_users\_for\_review** and identify the actors which have the highest mean.
- Observe the change in number of voted users over decades using a bar chart. Create a column called **decade** which represents the decade to which every movie belongs to. For example, the **title\_year** year 1923, 1925 should be stored as 1920s. Sort the column based on the column **decade**, group it by decade and find the sum of users voted in each decade. Store this in a new data frame called **df\_by\_decade**.
- Your task: Find the critic-favorite and audience-favorite actors

# IMDB Movie Analysis

## Design

**1 . Firstly I made a copy of the raw data where I can perform the Analysis so that what ever changes I made it will not affect the original data**

**2 Then dropping the columns which have no use for the analysis that we will be doing**

**3.Columns like ‘Color’, ‘director\_facebook\_likes’, ‘actor\_3\_facebook\_likes’, ‘actor\_2\_name’, ‘actor\_1\_facebook\_likes’, ‘cast\_total\_facebook\_likes’, ‘actor\_3\_name’, ‘facenumber\_in\_posts’, ‘plot\_keywords’, ‘movie\_imdb\_link’, ‘content\_rating’ ,‘actor\_2\_facebook\_likes’, ‘aspect\_ratio’, ‘movie\_facebook\_likes’ are the columns containing irrelevant data for the analysis tasks provided. So, these columns needs to be dropped.**

**4.After dropping the irrelevant columns now we need to remove the rows from the dataset having anyone of its column value as blank/ NULL**

**5.Then we need to get rid off the duplicate values in the dataset which can be achieved by using the ‘Remove Duplicate Values/ Cells’ available in the ‘Data’ tab**

# IMDB Movie Analysis

## Findings - I

**To find the movies with the highest profit:-**

**1. First we need to subtract the budget value from the gross value to get the profit.**

**2. Then, by using the scatter plot option we will plot values of profit(y\_axis) and budget(x\_axis)**

**3. Then with the help of graph we will be finding the outliers**

# IMDB Movie Analysis

## Findings - I(Cont...)

director_name	num_critic_for_reviews	gross	genres	actor_1_name	movie_title	num_voted_users	num_user_for_reviews	language	country	content_rating	budget	title_year	imdb_sc	Profit
James Cameron	723	760505847	Action   Adventure   Fantasy   Sci-Fi	CCH Pounder	Avatar	886204	3054	English	USA	PG-13	237000000	2009	7.9	523505847
Collin Trevorrow	644	652177271	Action   Adventure   Sci-Fi   Thriller	Bryce Dallas Howard	Jurassic World	418214	1290	English	USA	PG-13	150000000	2015	7.5	02177271
James Cameron	315	658672302	Drama   Romance	Leonardo DiCaprio	Titanic	793059	2528	English	USA	PG-13	200000000	1997	7.74	58672302
George Lucas	282	460935665	Action   Adventure   Fantasy   Sci-Fi	Harrison Ford	Star Wars: Episode IV - A New Hope	911097	1470	English	USA	PG	11000000	1977	8.74	49935665
Steven Spielberg	215	434949459	Family   Sci-Fi	Henry Thomas	E.T. the Extra-Terrestrial	281842	515	English	USA	PG	10500000	1982	7.9	424449459

**After removing the outliers, from the above table I have inferred that 'Avatar' was the highest profit making movie ever with a profit of 523505847**

# IMDB Movie Analysis

## Findings - II

To find the IMDB Top 250 we will:-

1. First we will filter out those rows whose num\_voted\_users > 25000 using the sort and filter option

2. Then we will arrange the dataset on the basis of imdb\_score in descending order

3. Then we will select only the top 250 rows for the further analysis

4. Then we will create a new column rank using the RANK() function and using the formula

=RANK(N2,\$N\$2:\$N\$251,0)+COUNTIFS(\$N\$2:N2,N2)-1

5. Then we will filter out (unselect 'English') from the language column and we will get the desired output

## Top - 5 IMDB Movies all languages

director_name	num_critic_for_reviews	gross	genres	actor_1_name	movie_title	num_voted_users	num_user_for_reviews	language	country	content_rating	budget	title_year	imdb_score	Rank
Frank Darabont	199	28341469	Crime   Drama	Morgan Freeman	The Shawshank Redemption	1689764	4144	English	USA	R	25000000	1994	9.3	1
Francis Ford Coppola	208	134821952	Crime   Drama	Al Pacino	The Godfather	1155770	2238	English	USA	R	6000000	1972	9.2	2
Christopher Nolan	645	533316061	Action   Crime   Drama   Thriller	Christian Bale	The Dark Knight	1676169	4667	English	USA	PG-13	185000000	2008	9.3	3
Francis Ford Coppola	149	57300000	Crime   Drama	Robert De Niro	The Godfather: Part II	790926	650	English	USA	R	13000000	1974	9.4	4
Peter Jackson	328	377019252	Action   Adventure   Drama   Fantasy	Orlando Bloom	The Lord of the Rings: The Return of the King	1215718	3189	English	USA	PG-13	94000000	2003	8.9	5

From the above table I have inferred that 'The Shawshank Redemption' had the highest IMDB ratings

# IMDB Movie Analysis

## Findings - II (Cont...)

### Top - 5 IMDB Movies all languages (except English)

director name	num_critic_for_review	gross	genres	actor_1_name	movie_title	num_voted_users	num_user_for_reviews	language	country	content_rating	budget	title_year	imdb_score	Rank
Sergio Leone	181	6100000	Western	Clint Eastwood	The Good, the Bad and the Ugly	503509	780	Italian	Italy	Approved	1200000	1966	8.9	8
Fernando Meirelles	214	7563397	Crime   Drama	Alice Braga	City of God	533200	749	Portuguese	Brazil	R	3300000	2002	8.7	19
Akira Kurosawa	153	269061	Action   Adventure   Drama	Takashi Shimura	Seven Samurai	229012	596	Japanese	Japan	Unrated	2000000	1954	8.7	20
Hayao Miyazaki	246	10049886	Animation   Family   Fantasy	Bunji Sugawara	Spirited Away	417971	902	Japanese	Japan	PG	19000000	2001	8.6	25
Florian Henckel von Donnersmarck	215	11284657	Drama   Thriller	Sebastian Koch	The Lives of Others	259379	407	German	Germany	R	2000000	2008	8.5	45

From the above table I have inferred that the movie 'The Good, the Bad and the Ugly' had the highest IMDB ratings w.r.t movies with all other languages (except English); it's country of origin in Italy

# IMDB Movie Analysis

## Findings - III

To find the best top 10 directors on the basis of mean of imdb\_score we will:-

1. First select the imdb\_score column of the cleaned dataset
2. Then we will click on pivot table
3. We will add director\_name into the series section of the pivot table
4. Then we will add average imdb\_score into the values section of the pivot table
5. Then we will first sort the data on the basis of average of imdb\_score in descending order and then on the basis of director name alphabetically

Top 10 director having the highest IMDB mean	
Director Name	mean of Imdb Score
Charles Chaplin	8.6
Tony Kaye	8.6
Alfred Hitchcock	8.5
Damien Chazelle	8.5
Majid Majidi	8.5
Ron Fricke	8.5
Sergio Leone	8.433333333
Christopher Nolan	8.425
Asghar Farhadi	8.4
Marius A. Markevicius	8.4

From the above table I have inferred that Charles Chaplin and Tony Kaye had the highest mean of IMDB Score i.e. 8.6

# IMDB Movie Analysis

## Findings - IV

To find the Popular Genres we will:-

1. First select the genres column of the cleaned dataset

2. Then we will go for the pivot table option

3. Then we will Select the genres name as row labels

4. Then we will take the values as the count of the number of genres and then sort it in descending order on the basis of count of the number of genres

Top 10 Popular genres are:-	
Genre name	count
Drama	153
Comedy   Drama   Romance	151
Comedy   Drama	147
Comedy	145
Comedy   Romance	135
Drama   Romance	119
Crime   Drama   Thriller	82
Action   Crime   Thriller	55
Action   Crime   Drama   Thriller	50
Action   Adventure   Sci-Fi	46

From the above table I have inferred that genre named 'Drama' was the most popular with a count of 153

# IMDB Movie Analysis

## Findings - V

To find the critic-favorite and audience-favorite actors we will:-

1. First three new columns namely, Meryl\_Streep, Leo\_Caprio, and Brad\_Pitt which contain the movies in which the actors: 'Meryl Streep', 'Leonardo DiCaprio', and 'Brad Pitt' are the lead actors from the actor\_1\_name column

2. Then we will append the above 3 created columns into 1 column named actor\_1\_name\_combine

3. Then we will group the 3 columns of critic-favorite and audience-favorite actors

4. Then using the pivot table we will find the average, sum and count of critic favorite and audience-favorite actors

Row Labels	Average of num_user_for_reviews	Sum of num_user_for_reviews	Count of num_user_for_reviews2
Leonardo DiCaprio	914.4761905	19204	21
Brad Pitt	742.3529412	12620	17
Meryl Streep	297.1818182	3269	11
Grand Total	716.1836735	35093	49

# IMDB Movie Analysis

## Findings - V(Cont..)

Row Labels	Average of num_critic_for_reviews	Sum of num_critic_for_reviews	Count of num_critic_for_reviews2
Leonardo DiCaprio	330.1904762	6934	21
Brad Pitt	245	4165	17
Meryl Streep	181.4545455	1996	11
Grand Total	267.244898	13095	49

**From the above two graphs I have inferred that  
'Leonardo DiCaprio' was both critic-favorite and audience-favorite**

# IMDB Movie Analysis

## Findings - VI

Change in number of voted users over decades using a bar chart

# IMDB Movie Analysis

## Findings - VI (Cont..)

Change in number of voted users over decades using a bar chart

Decade	total num_of_votes_in_decade
1921-1930	116387
1931-1940	966520
1941-1950	72324
1951-1960	1097601
1961-1970	2607791
1971-1980	10196874
1981-1990	22100624
1991-2000	78706936
2001-2010	178592461
2011-2020	100148261
Total	394605779

**From the above table and Bar plot I have inferred that most number of votes were in the decade 2001-2010 with a count of 178592461**

# IMDB Movie Analysis

## Analysis

**Using the Why's approach I am trying to find some useful insights**

- **Why is it that the Most rated IMDB movie and the highest profit movie not the same?**
- -----> **Maybe, due to fact that during the IMDB rating only recognized and people who know how to vote on IMDB have the access to the IMDB portal. On the other hand the profit is calculated on the basis of the tickets sold in theatres worldwide.**
- **Why there are more number of votes during the decade 2001-2010?**
- -----> **The period 2001-2010 saw many scientific advancements and computer graphics advancement, also during this interval there was a splendid increase in the production of movies all over the world, so huge number of movies were produced and released during this decade. Also before 2000 there were no laws around the world that had a separate ministry/board/committee from the Government side that looked into the matters of film production and release**
- **Why is it that only movies having language as 'English' are the top 5 ranked movies on the basis of IMDB?**
- -----> **Movies having language as English were having country of origin as USA; Also it is a well known fact that USA economy was robust during those days. So the social media investors looked for directors made movies so as to gain some financial gains**

# IMDB Movie Analysis

## Analysis (Cont..)

- **Why is it that only Drama and Comedy had the highest popularity?**
- ----> **Most of people all over the world are stressed with their work life so they need a relaxing refreshment and not some action or horror type thing. So people prefer watching movies that were of Comedy or Drama genre or both. But, most of them preferred Comedy genre films**
- **Why is it that there were more number of votes for the decade 2001-2010 than compared to 2011-2020, though there was advancement in graphics and animation during 2011-2020?**
- ----> **It is a fact that there was a great and immense growth of technology not only in the graphics and animation sector but in all aspects of life; Also it was during this interval VPN was introduced; VPN led to piracy (illegal distribution of film) due to which most of people avoided going to theatres.**

# IMDB Movie Analysis

## Conclusion

**In Conclusion, I would like to conclude that IMDB Movie Analysis or any such analysis is done not only by Movie makers before movie production, but it is also done by various investors, stakeholders, theatre outlet owners.**

**Normal people would not mind to do such analysis but such analysis plays an crucial part during the pre-production phase of the movies and also during the post-production phase**

**Also, it is not necessary that the movie with the highest IMDB rating will have the highest profit.**

**Profit is calculated truly on the basis on the number of tickets sold by theatres all over the world**

**Most of the people are tired with their daily lives and they prefer movies with Comedy/ Drama genre or both, and they would not go for movies with Action/Horror genre**

**So, directors and production team must keep in mind the above points and shall do the pre-production analysis before the commencement of filming**

## Bank Loan Case Study

### Description

**The loan providing companies find it hard to give loans to the people due to their insufficient or non-existent credit history. Because of that, some consumers use it as their advantage by becoming a defaulter. Suppose you work for a consumer finance company which specializes in lending various types of loans to urban customers. You have to use EDA to analyze the patterns present in the data. This will ensure that the applicants capable of repaying the loan are not rejected.**

**When the company receives a loan application, the company has to decide for loan approval based on the applicant's profile. Two types of risks are associated with the bank's decision:**

- **If the applicant is likely to repay the loan, then not approving the loan results in a loss of business to the company.**
- **If the applicant is not likely to repay the loan, i.e. he/ she is likely to default, then approving the loan may lead to a financial loss for the company.**

**When a client applies for a loan, there are four types of decisions that could be taken by the client/ company:**

- 1. Approved: The company has approved loan application**
- 2. Cancelled: The client cancelled the application sometime during approval. Either the client changed her/ his mind about the loan or in some cases due to a higher risk of the client he received worse pricing which he did not want.**
- 3. Refused: The company had rejected the loan (because the client does not meet their requirements etc.).**
- 4. Unused Offer: Loan has been cancelled by the client but on different stages of the process.**

## Bank Loan Case Study

### The Problem

**This case study aims to give you an idea of applying EDA in a real business scenario. In this case study, apart from applying the techniques that you have learnt in the EDA module, you will also develop a basic understanding of risk analytics in banking and financial services and understand how data is used to minimize the risk of losing money while lending to customers.**

**It aims to identify patterns which indicate if a client has difficulty paying their installments which may be used for taking actions such as denying the loan, reducing the amount of loan, lending (to risky applicants) at a higher interest rate, etc. This will ensure that the consumers capable of repaying the loan are not rejected. Identification of such applicants using EDA is the aim of this case study.**

**In other words, the company wants to understand the driving factors (or driver variables) behind loan default, i.e. the variables which are strong indicators of default. The company can utilize this knowledge for its portfolio and risk assessment.**

**To develop your understanding of the domain, you are advised to independently research a little about risk analytics – understanding the types of variables and their significance should be enough).**

## Bank Loan Case Study

### Design

**Firstly create a copy of the raw data**

**Then the percentage of null values needs to be analyzed and those columns that have more than 50% of the null data have to be dropped And those columns with less than 50% of the null data have to be replaced with mean or median or the highest occurring categorical variables.**

**The following columns needs o be dropped as they have more than 50% of the NULL values**

- **OWN\_CAR\_AGE**
- **EXT\_SOURCE\_1**
- **APARTMENTS\_AVG**
- **BASEMENTAREA\_AVG**
- **YEARS\_BUILD\_AVG**
- **COMMON\_AREA\_AVG**
- **ELEVATORS\_AVG**
- **ENTRANCES\_AVG**
- **FLOORSMAX\_AVG**
- **FLOORSMIN\_AVG**

### Design (Cont....)

**Replacing Blanks in Organization\_type column of the Application**

**Dataset with the highest occurring categorical variable**

--> **Highest occurring categorical variable is 'Business Entity Type 3'**

**The following columns of the previous application datasets need to be dropped as they are irrelevant for doing the data analysis**

- **HOUR\_APPR\_PROCESS\_START**
- **WEEKDAY\_APPR\_PROCESS\_START\_PREV**
- **FLAG\_LAST\_APPL\_PER\_CONTRACT**
- **NFLAG\_LAST\_APPL\_IN\_DAY**
- **SK\_ID\_CURR**
- **WEEKDAY\_APPR\_PROCESS\_START**

**Removing the rows with the values 'XNA' &'XAP' for the column:**

**NAME\_TYPE\_SUITE**

----> **Replace Blanks with Unaccompanied**

**AMT\_ANNUITY :- Replace Blanks with 21340(median)**

## Bank Loan Case Study

### Findings - I

**The Target Variable Pie chart shows that almost 92% of the total clients had no problem during payment while 8% of the clients had some or the other problem**

## Bank Loan Case Study

### Findings - II

**From the GENDER\_VARIABLE pie chart we can infer that almost 66% of the clients are female and 34% of the clients are Male. The 0% of the applicants have gender as XNA which can be ignored**

## Bank Loan Case Study

### Findings - III

From the bar graphs of count and percentage The bank can target those groups who do not have their own apartment i.e. the bank may consider the people living in Co-op apartment, Municipal Apartment, Rented Apartment and people living with their parents

## Bank Loan Case Study

### Findings - IV

From the above bar plot we can infer that most of the applicants belong to the Age Group '31-40'

## Bank Loan Case Study

### Findings - V

From the above Bar plots we can infer that clients/applicants in the Age Group '31-40' are having the highest number when it comes to doing/returning Payment to Banks also they have the highest count of payment issues when returning money to the bank

## Bank Loan Case Study

### Findings - VI

From the above Bar plot we can infer that clients belonging to 'Low' income range have the highest count when it comes to clients with no payment issues

From the above Bar plot we can infer that clients belonging to 'Medium' income range have the highest count when it comes to clients with payment issues

## Bank Loan Case Study

### Findings - VII

From the above bar plot we can infer that clients with occupation\_type 'Laborers' have the highest number of count when it comes to clients with no payment issues

From the above bar plot we can infer that clients with occupation\_type 'Laborers' have the highest number of count when it comes to clients with payment issues

## Bank Loan Case Study

### Findings - VII

**From the above Bar plot we can infer that clients having income\_type as 'WORKING' have the highest count when it comes to clients with no payment issues**

**From the above Bar plot we can infer that clients having income\_type as 'WORKING' have the highest count when it comes to clients with payment issues**

## Bank Loan Case Study

### Findings - IX

**From the above Bar plot we can infer that client having the total income range as 'LOW' have the highest count when it comes to clients having no payment issues**

**From the above Bar plot we can infer that client having the total income range as 'LOW' have the highest count when it comes to clients having payment issues**

## Bank Loan Case Study

### Findings - X

From the above Bar plot we can infer that clients having total count of family members as 2 have the highest count when it comes to clients having no payment issues

From the above Bar plot we can infer that clients having total count of family members as 2 have the highest count when it comes to clients having payment issues

## Bank Loan Case Study

### Findings - XI

**From the above Bar Plot we can infer that Clients with CODE\_GENDER = 'F' have the highest number of non-defaulters i.e.  $188278 - 14170 = 174108$**

## Bank Loan Case Study

### Findings - XII

**From the above Bar Plot we can infer that clients having NAME\_INCOME\_TYPE = 'WORKING' having the highest count of Non-defaulters i.e.  $143550 - 15224 = 128326$**

## Bank Loan Case Study

### Findings - XII

**From the above Bar Plot we can infer that clients having  
NAME\_EDUCATION\_TYPE = 'SECONDARY/SECONDARY SPECIAL'  
have the highest count for Non defaulters i.e. $198867 - 19524 = 179343$**

## Bank Loan Case Study

### Findings - XII

**From the adjacent Bar Plot we can infer that clients having  
NAME\_FAMILY\_STATUS = 'MARRIED' have the highest count of  
Non defaulters i.e. $181582 - 14850 = 166732$**

## Bank Loan Case Study

### Findings - XIV

From the above Bar Plot we can infer that clients having  
**NAME\_HOUSING\_TYPE = 'House/ Apartment'**  
have the highest count of Non-defaulters i.e.  
 $251596 - 21272 = 230324$

## Bank Loan Case Study

### Findings - XV

**From the adjacent Bar plot we can infer that clients having occupation\_type = 'Laborers' have the highest count for Non-defaulters i.e.**

$$139461 - 12116 = 127345$$

## Bank Loan Case Study

### Findings - XV

**From the above Bar plot we can infer that Females belonging to Low income group are the highest number of clients with no payment issues**

## Bank Loan Case Study

### Findings - XVII

**From the above Bar plot we can infer that Females belonging to Low income group are the highest number of clients with payment issues**

## Bank Loan Case Study

### Findings - XVIII

**From the above Bar Plot we can infer that clients having credit amt range as 'Low' and education status as 'Secondary/ Secondary Special' have the highest count for clients with no payment issues**

## Bank Loan Case Study

### Findings - XIX

**From the above Bar Plot we can infer that clients having credit amt range as 'Medium' and education status as 'Secondary/ Secondary Special' have the highest count for clients with payment issues**

## Bank Loan Case Study

### Findings - XX

**From the above Bar plot we can infer that clients with total\_income\_range as 'Low' and family\_status as 'Married' have the highest count for clients having no payment issues**

## Bank Loan Case Study

### Findings - XXI

**From the adjacent Bar plot we can infer that clients with total\_income\_range as 'Low' and family\_status as 'Married' have the highest count for clients having payment issues**

## Bank Loan Case Study

### Findings - XXII

Count of NAME_CONTRACT_STATUS	Column Labels	Approved	Canceled	Refused	Unused offer	Grand Total
Row Labels	Approved

## Bank Loan Case Study

### Findings - XXII (Cont...)

**From the above Table and Bar Plot we can infer that Name of Contract status i.e. Repairs work has the highest count of Approved Loans**

## Bank Loan Case Study Analysis

**Using the Why's approach I am trying to find some more useful insights**

- **Why is it that the target\_variable is of so much importance?**
  - > In this dataset target\_variable represents whether the client had some payment issues(1) or the client didn't had some payment issues(0); It is important because the target\_variable decides whether the bank should increase/ decrease it's interest rates on various loans given by the bank; Also in this case almost 92% of the clients didn't had any payment issues and only 8% of them had payment issues, this tells that bank's credit score is good and it has very less or no Non-preforming Accounts.
- **Why is it that proportion of Female clients more than that of the Male clients?**
  - > In countries like India especially there have been laws made by the Government for Women who want to establish their own Start-up, Business or their own classes, catering services, etc.; These laws offer loans to women clients at a relatively low interest rates; Also in some cases people purposely use their retired/ household mother or household wife so that they can get some sort of concession i.e. low interest rates while applying for Home loans
- **Why should bank prefer other Housing type clients though House/ Apartments Housing type clients have the highest proportion of non-defaulters?**
  - > Cause people in other groups like Municipal Apartment, Co-op Apartment, Rented Apartment, with Parents are in the search of their own house of their own name plate; Also now a days in India the joint family system is declining and the future generations opt to live in their own 1/2 BHK's rather than living together will all family members in big Family Apartments

## Bank Loan Case Study

### Analysis (Cont..)

- **Why should bank opt for working class clients more than the state-government class clients though state-government employees enjoy a lot of benefits and regular salary?**
- ----> **It is true that state government employee enjoy a lot of benefits but they also get housing allowances greater than that of working class and in some cases they even get an apartment to live with their families as long as they work for the state government; On the other hand the working class don't enjoy such housing allowances or get very less of it, also the working class don't get an apartment to live in for their entire professional life(i.e. until retirement) and so working class opt for purchasing their own house by taking house loan**
  
- **Why should Bank not go for approving loans to 'Laborers' occupation\_type clients though they have the highest non-defaulters count?**
- ----> **Laborers take only personal loans for marriage or house repair purpose and their loan amount is also less and the interest on such loans is also less as compared to home loan, car loan, etc. which in turn will cause less profits to the bank.**
  
- **Why is it that females with low income group have the lowest count of defaulters?**
- ----> **Females belonging to such groups take loan of small amounts just for starting their own start-ups, business or catering/ parlor services and they usually enjoy benefit from government schemes for such purpose**

## Bank Loan Case Study

### Conclusion

**In conclusion, I would like to conclude the following-**

- **The proportion/ percentage of the defaulters(target = 1) is around 8% and that of non-defaulters(target = 0) is around 92%**
- **The Bank generally lends more loan to Female clients as compared to Males clients as the count of Female clients in the defaulter's list is less than that of Males. Still Bank can look for more Male clients if their credit amount is satisfied**
- **Also the clients who belong to Working class tend to pay their loans on time followed by the clients who fall under Commercial Associate**
- **Clients having Education status like Secondary/ Higher Secondary or more tend to pay loan on time so bank can prefer lending loans to clients having such Education Status**
- **Clients who fall in the Age Group 31-40 have the highest count for paying off their loans on time followed by the clients who fall in the Age Groups 41-60**
- **Clients having LOW credit amount range tend to pay off their loans on time than compared to HIGH and MEDIUM credit range**
- **Clients living with their Parents tend to pay off their loans quickly as compared to other housing type. So Bank can lend loan to clients having housing type →Living with Parents**
- **Clients taking loan for purchasing New Home i.e. clients taking Home Loans or purchasing New Car i.e. Car Loans and clients who have a income type as State Servant tend to pay their loans on time and hence Bank should prefer clients having such background**
- **The Bank should be more cautious when lending money to clients with Repairs purpose because they have high count of Defaulters along with High count of Defaulters**

## Analyzing the Impact of Car Features on Price and Profitability

### Description

- The automotive industry has been rapidly evolving over the past few decades with a growing focus on fuel efficiency, environmental sustainability, and technology innovation. With increasing competition in the market, manufacturers want to change the consumer landscape.
- This project objective is to analyze the car features that affect the PROJECT DESCRIPTION manufacturers' car prices. As a Data Analyst, the client has asked how can a car manufacturer optimize pricing and product development decisions to maximize profitability while meeting consumer demand.
- Dataset contains information on various car models and their applications. The dataset is available on Kaggle by Cooper College, New York City.
- Total number of observations:- 11,813
- File type:- CSV

## Analyzing the Impact of Car Features on Price and Profitability

### Approach

- For analysis I used descriptive statistics, regression analysis, and visualization to visualize the charts and graphs.
  - The reason behind using descriptive analysis was to find out the mean of the car's features variable and then visualize them in the form of charts and graphs.
  - Regression Analysis told the dependency of independent variables to dependent variables i.e., the specific features of the car impact the car's price.
  - While creating the charts it was difficult to summarize the values of variables in sum or average

## Analyzing the Impact of Car Features on Price and Profitability

### Design

**1 . Firstly I made a copy of the raw data where I can perform the Analysis so that what ever changes I made it will not affect the original data**

**2.Then dropping the columns which have no use for the analysis that we will be doing**

**3.After dropping the irrelevant columns now we need to remove the rows from the dataset having anyone of its column value as blank/ NULL.**

**4.Then we need to get rid off the duplicate values in the dataset which can be achieved by using the 'Remove Duplicate Values/ Cells' available in the 'Data' tab**

# Analyzing the Impact of Car Features on Price and Profitability

## **Findings - I**

**Insight Required:** How does the popularity of a car model vary across different market categories?

From the above line chart, we can see that Hatchback & Flex Fuel are the highest populated and have the highest number of cars.

## Analyzing the Impact of Car Features on Price and Profitability

### **Findings - I (Cont..)**

From the above scatter plot, we can observe that cars that have high engine power have higher prices. Thus, the car's power increases as the car's price will also increase.

## Analyzing the Impact of Car Features on Price and Profitability

### Findings - II

**Insight Required:** Which car features are most important in determining a car's price?

From the above bar chart, we can see that Engine Cylinders have the strongest relationship with MSRP.

## Analyzing the Impact of Car Features on Price and Profitability

### **Findings - III**

**Insight Required:** How does the average price of a car vary across different manufacturers?

From the above bar chart, we can say that Bugatti has the highest average price.

## Analyzing the Impact of Car Features on Price and Profitability

### Findings - III (Cont...)

**Insight Required:** What is the relationship between fuel efficiency and the number of cylinders in a car's engine?

From the above chart, we can see that cylinders having 4 is giving maximum fuel efficiency. 400 300 200 100 0 HIGHWAY MPG And Fuel efficiency is inversely proportional to the no. of cylinders.

## Analyzing the Impact of Car Features on Price and Profitability

### Building the Dashboard

Task 1: How does the distribution of car prices vary by brand and body style?

From the above-stacked column, Chevrolet and Mercedes-Benz have the highest contribution to the car's price.

## Analyzing the Impact of Car Features on Price and Profitability

**Task 2:** Which car brands have the highest and lowest average MSRPs, and how does this vary by body style?

## Analyzing the Impact of Car Features on Price and Profitability

**Task 3:** How do the different features such as transmission type affect the MSRP, and how does this vary by body style?

From the above line chart, we can see that as time increases fuel efficiency (Highway MPG) also increased or improved.

# Analyzing the Impact of Car Features on Price and Profitability

**Task 5:** How does the car's horsepower, MPG, and price vary across different Brands?

From the above Bubble chart, we can see that if engine hp increase, highway mpg will decrease and the price will also increase.

# Analyzing the Impact of Car Features on Price and Profitability

# Analyzing the Impact of Car Features on Price and Profitability

## Result:

- Coupe body style contributing maximum to the car's MSRP
- In transmission type automated\_manual creates high impact because in a single car having both automated and manual gear systems will be more beneficial rather than a single gear system.
- Overall, fuel efficiency and Coupe body style features highly impact the car's price and profitability.
- Companies need to produce high or at least good fuel efficiency of cars by which the majority of the class can afford a car.

# ABC Call Volume Trend Analysis

## Description

**A customer experience (CX) team consists of professionals who analyze customer feedback and data, and share insights with the rest of the organization. Typically, these teams fulfil various roles and responsibilities such as: Customer experience programs (CX programs), Digital customer experience, Design and processes, Internal communications, Voice of the customer (VoC), User experiences, Customer experience management, Journey mapping, Nurturing customer interactions, Customer success, Customer support, Handling customer data, Learning about the customer journey.**

**Let's look at some of the most impactful AI-empowered customer experience tools you can use today:  
Interactive Voice Response (IVR), Robotic Process Automation (RPA), Predictive Analytics, Intelligent Routing**

**In a Customer Experience team there is a huge employment opportunities for Customer service representatives A.k.a. call centre agents, customer service agents. Some of the roles for them include: Email support, Inbound support, Outbound support, social media support.**

**Inbound customer support is defined as the call centre which is responsible for handling inbound calls of customers. Inbound calls are the incoming voice calls of the existing customers or prospective customers for your business which are attended by customer care representatives. Inbound customer service is the methodology of attracting, engaging, and delighting your customers to turn them into your business' loyal advocates. By solving your customers' problems and helping them achieve success using your product or service, you can delight your customers and turn them into a growth engine for your business.**

# ABC Call Volume Trend Analysis

## The Problem

- Calculate the average call time duration for all incoming calls received by agents (in each Time\_Bucket).
- Show the total volume/ number of calls coming in via charts/ graphs [Number of calls v/s Time]. You can select time in a bucket form (i.e. 1-2, 2-3, ...)
- As you can see current abandon rate is approximately 30%. Propose a manpower plan required during each time bucket [between 9am to 9pm] to reduce the abandon rate to 10%. (i.e. You have to calculate minimum number of agents required in each time bucket so that at least 90 calls should be answered out of 100.)
- Let's say customers also call this ABC insurance company in night but didn't get answer as there are no agents to answer, this creates a bad customer experience for this Insurance company. Suppose every 100 calls that customer made during 9 Am to 9 Pm, customer also made 30 calls in night between interval [9 Pm to 9 Am] and distribution of those 30 calls are as follows:

Distribution of 30 calls coming in night for every 100 calls coming in between 9am - 9pm (i.e. 12 hrs slot)

9pm- 10pm	10pm - 11pm	11pm- 12am	12am- 1am	1am - 2am	2am - 3am	3am - 4am	4am - 5am	5am - 6am	6am - 7am	7am - 8am	8am - 9am
3	3	2	2	1	1	1	1	3	4	4	5

- Now propose a manpower plan required during each time bucket in a day. Maximum Abandon rate assumption would be same 10%.

**Assumption:** An agent work for 6 days a week; On an average total unplanned leaves per agent is 4 days a month; An agent total working hrs is 9 Hrs out of which 1.5 Hrs goes into lunch and snacks in the office. On average an agent occupied for 60% of his total actual working Hrs (i.e 60% of 7.5 Hrs) on call with customers/ users. Total days in a month is 30 days.

# ABC Call Volume Trend Analysis

## Findings - I

Average Call answered in seconds per time bucket

**From the above bar plot we can infer that time\_bucket 19\_20 i.e. 7PM to 8PM had the highest of average of calls answered in seconds i.e. 203.4**

# ABC Call Volume Trend Analysis

## Findings - II

TOTAL SUM OF CALLS ANSWERED IN EACH TIME BUCKET

**From the above Bar plot we can infer that the time\_bucket 12\_13 i.e. during the time period 12PM to 1PM had the highest total number of calls answered i.e. 1819327**

# ABC Call Volume Trend Analysis

## Findings - III

TOTAL COUNT OF CALLS ANSWERED IN EACH TIME BUCKET

From the above bar plot we can infer that the time\_bucket 12-13 i.e. 12PM to 1PM had the highest count of calls answered i.e. 9432

# ABC Call Volume Trend Analysis

## Findings - IV

Total number of incoming calls per time bucket

**From the above bar plot we can infer that time bucket 11\_12 i.e. 11AM to 12PM has the highest count for total number incoming calls i.e. 14626**

# ABC Call Volume Trend Analysis

## Findings - V

Total share in percent for incoming calls in each time bucket

**From the above bar plot we can infer that the time bucket 11\_12 i.e. 11 AM to 12 PM has the highest share for incoming calls i.e. 12.40%**

# ABC Call Volume Trend Analysis

## Findings - VI

Count of Call_Status	Column Labels

**From the table we can infer that the current abandon rate is around 30%**

# ABC Call Volume Trend Analysis

## Findings - VII

The distribution of manpower plan per time bucket to keep abandon rate at 10% i.e. keeping call answered rate at 90% is as follows:-

Call_Status	answered	
Row Labels	Count of Customer_Phone_No	Agents allotment
9_10	4428.0	3
10_11	6368.0	4
11_12	8560.0	6
12_13	9432.0	7
13_14	8829.0	6
14_15	7974.0	6
15_16	7760.0	5
16_17	7852.0	5
17_18	7601.0	5
18_19	6200.0	4
19_20	4578.0	3
20_21	2870.0	2
Grand Total	82452.0	57

AGENTS ALLOTMENT PER TIME BUCKET TO KEEP ABANDON RATE AT 10%

# ABC Call Volume Trend Analysis

## Findings - VIII

Night time slot	Calls per slot	Total hours needed	Agents needed	Time distribution
21_22	3	7.641135	13	10%
22_23	3	7.641135	13	10%
23_24	2	5.09409	8	7%
00_01	2	5.09409	8	7%
01_02	1	2.547045	4	3%
02_03	1	2.547045	4	3%
03_04	1	2.547045	4	3%
04_05	1	2.547045	4	3%
05_06	3	7.641135	13	10%
06_07	4	10.18818	17	13%
07_08	4	10.18818	17	13%
08_09	5	12.735225	21	17%
Total	30	76.41135	126	100%

The table above shows the desired distribution of the night calls to keep the abandon rate at 10%

- Since we have only 17 agents during night we need to distribute in an non analytical way i.e. the agents who work in 19\_20, 20\_21 time bucket to wait and work in 21\_22 and 22\_23 time buckets as well
- Also agents who work during 9\_10, 10\_11 time bucket can be asked to work for 7\_8 and 8\_9 time bucket as well
- The agents who work in the time bucket 1\_2, 2\_3, 3\_4 and 4\_5 can be asked to work in time buckets 6\_7, 7\_8 and 8\_9 so as to keep the abandon rate at 10%

# **ABC Call Volume Trend Analysis**

## **Analysis**

**Using the Why's approach I am trying to find some more insights:-**

- **Why is that the average call answered were more in count in the time bucket of 10\_11, 18\_19, 19\_20 and 20\_21 as compared to other time buckets?**
- —> **Most of the customers are office people and they need to reach office by 10 AM or 11 AM, so these customers call during 10\_11 time bucket i.e. while they in transit to office or have reached office and have some free time before they start their work; During the time bucket 18\_19, 19\_20 and 20\_21 the customers have either left their office and reached home or they are in the transit to reach home and during these time period i.e. 6 Pm to 9 Pm people have free time where they can share their concern to the customer service. During these time buckets most of the calls are from individual people with small problems which can be resolved quickly**
- **Why is it that the time bucket 11\_12 has the highest number of incoming calls but it does not have the highest number of average answered calls?**
- —> **Maybe there were more number of incoming calls in the time bucket 11\_12 and there were not enough personnel to handle most of the queries of the customers during the 11\_12 time bucket**

## ABC Call Volume Trend Analysis

### Analysis (Cont...)

- **Why is it that the total number of incoming calls reached its peak value during the time bucket 11\_12 and got decreased from time bucket 12\_13 onwards?**
- **--> It is a general tendency of the customers(people) that they want their query/complaint get resolved on that particular day itself when they called the customer center; so most of the customers try to place their complaint/query before 12 Pm so that by the end of the day their complaint gets resolved depending upon the complexity of the problem faced by the customer**
  
- **Why is proportion if the monthly transfer rate is less than compared to monthly answered and abandon rate?**
- **--> In most of the customer service centers they have the dedicated toll free number of the particular problem faced by the customer, also there are skilled people at the call center who are well versed with the problems they come across while handling and guiding thousands of customers on daily basis; And so most of the calls gets answered by providing an solution to the query, some of the calls get abandon due to unavailability or shortage of the skilled person, and very few calls gets transferred from the junior level to senior level if the problem is too complex for the junor level expertise**

## ABC Call Volume Trend Analysis

### Analysis (Cont...)

- **Why is that one cannot provide the exact distribution of agents during the night time i.e. from 9 PM to 9 AM if the number of agents available during the night shift are already defined, so as to keep the abandon rate 10%?**
- **—> For this particular case, Since we have only 17 agents during night we need to distribute in an non analytical way i.e. the agents who work in 19\_20, 20\_21 time bucket to wait and work in 21\_22 and 22\_23 time buckets as well. Also agents who work during 9\_10, 10\_11 time bucket can be asked to work for 7\_8 and 8\_9 time bucket as well. he agents who work in the time bucket 1\_2, 2\_3, 3\_4 and 4\_5 can be asked to work in time buckets 6\_7, 7\_8 and 8\_9 so as to keep the abandon rate at 10%. Also, the company needs to consider various factors like how far is the home of the agent if he/she is made to do night shift, Is the transport facility available during the night hours from the agent's home to company and many other factors and hence the exact distribution cannot be given using an analytical approach**

# ABC Call Volume Trend Analysis

## Conclusion

**In the conclusion, I would like to conclude the following-**

- **From the previous analysis we can derive that Avg calls answered per agent is 198.6 in each time bucket**
- **We need to reduce the abandon rate by 30%(current) – 10% (desired) = 20% i.e. we need to increase call answered rate by 70% (current) + 20%(change) = 90% .So, we need to have 90% of the total calls to be answered so as to reduce the abandon rate to 10%**
- **Total avg calls incoming per day = 5130 • Avg calls answered per second = 198.6 • Answered rate = 90% i.e. 0.9 • Seconds per hour = 3600 • So, time required to answer 90% of the incoming calls =  $5130 * 198.6 * 0.9 / 3600 =$  • So, new total number of agents working per day is 255 divided by the number of hours an agent actually works(on a consumer call) i.e.  $4.5 = 255 / 4.5 = 56.67 = 57$  Agents working per day 254.7001826**
- **So, to have a 10% abandon rate we need 57 Agents working per day**
- **From the assumptions given the following points were noted:-**
- **In a day an agent work for 9 hours → Total Agent working hours = 9 HOURS**
- **Out of the total 9 hours , 1.5 hours goes for lunch and coffee/ tea breaks; so remaining working hours =  $9 - 1.5 = 7.5$  HOURS**
- **Out of the remaining 7.5 hours per day an agent is occupied with consumers call for only 60% of the time i.e. 60% of 7.5 i.e.  $0.6 * 7.5 = 4.5$ . So, an agent spends only 4.5 hours per day out of total 7.5 hours on consumer calls. An agent works 6 days a week. In a month of 30 days 6 days per week; In a month of 30 there are 4 weeks; 7 days per week means total 28 days out of which 4 days are unplanned leave**

# ABC Call Volume Trend Analysis

## Conclusion (Cont...)

- **Days of agent on floor =  $(20*7)/ 28 = 5$  days. Now, total days left  $28 - 4 = 24$  days. Per week there is one Sunday which is an official holiday for all workplaces around the world; So in a month of 30 there are 4 Sundays. Now total days left for work =  $24 - 4 = 20$  days .So, an agent is available to work for 20 days in a month of 30 days**
- **In a certain scenario there are calls from consumers not only during the day time but also during the night time and if there are no agents available during the night time to answer the call then it creates a bad impression on the consumer regarding the company**
- **Now we need to give the distribution of the total manpower available for each time bucket right from 9AM to 9 PM and then from 9 PM to 9 AM, keeping the abandon rate at 10% i.e. keeping the answered rate at 90%**
- **For each 100 day calls there are 30 night calls; then for 5130 day calls there will be :  $5130 * 30 / 100 = 1539$  night calls. • So there are 1539 night calls for a total of 5130 day calls**
- **So, the additional working hours keeping the answered rate at 90% will be  $1539 * 198.6(\text{avg calls answered per sec}) * 0.9 / 3600(\text{total seconds in each hour}) = 76.41135$**
- **So, additional agents needed by the company to answer night calls as well be  $76.41135 / 4.5 = 16.98 = 17$**
- **So, we need additional 17 agents to answer the night calls as well, making the total number of agents working per day keeping the answer rate to 90% will be  $57(\text{day call answer 90\%}) + 17(\text{night call answer 90\%}) = 74$  agents . So, we need 74 Agents per day to answer the consumer calls from day as well as the night time keeping the answered rate to 90% / Abandon rate to 10%**
